1. General description

1.1 Introduction

Kingtech Group Co.,Ltd PV101048W0230P is a color active matrix thin film transistor (TFT) liquid crystal display (LCD) that uses amorphous silicon TFT as a switching device. This model is composed of a TFT LCD panel, a driving circuit and a back light system. This TFT LCD has a 10.1 (16:10) inch diagonally measured active display area with FHD (1920horizontal by 1200 vertical pixel) resolution.

1.2 Features

10.1 (16:10 diagonal) inch configuration

16.7M color by 8bit R.G.B Signal input with EDP 1.4 interface

RoHS Compliance

1.3 Applications

Mobile NB, Machine

3.2 Measuring Condition

Measuring surrounding: dark room ,LED current IL=*mA
Ambient temperature: 25±2oC ;15min. warm-up time.

3.3 Measuring Equipment

FPM520 of Westar Display technologies, INC., which utilized SR-3 for Chromaticity and BM-5A for other optical characteristics. Measuring spot size: 20 ~ 21 mm
Note (1) Definition of Viewing Angle :

**Note (2) Definition of Contrast Ratio (CR):**
Measured at the center point of panel

$$CR = \frac{\text{Luminance with all pixels white}}{\text{Luminance with all pixels black}}$$

Note (3) Definition of Response Time: Sum of TR and TF

## Note (4) Definition of optical measurement setup

Note (5) Definition of brightness uniformity

$$\text{Luminance uniformity} = \frac{(\text{Min Luminance of 9 points})}{(\text{Max Luminance of 9 points})} \times 100\%$$

**Note (6) Rubbing Direction (The different Rubbing Direction will cause the different optimal view direction).**

Note (7) Measured at the brightness of the panel when all terminals of LCD panel are electrically open.

When VDD operating within 2.7V ≦ VDD < 3.0V and td ≦10ms, the display may become abnormal. V$_{DD}$ dip condition should also follow the power on/off conditions for supply voltage.
Note 2 power on inrush current circuit

6.2 Back-Light Unit

The backlight system is an edge-lighting type with 42LED.

The characteristics of the LED are shown in the following tables.

Item	Symbol	Min.	Typ.	Max.	Unit	Note
LED current	VL	18.0	19.2	21.0	V	(2)
LED Voltage	IL		90		mA	
Operating LED life time	Hr	50000	--	-	Hour	(1)(2)

**Note (1) LED life time (Hr) can be defined as the time in which it continues to operate under the condition: Ta=25±3℃, typical IL value indicated in the above table until the brightness becomes less than 50%.**

Note (2) The "LED life time" is defined as the module brightness decrease to 50% original brightness at Ta=25℃. The LED lifetime could be decreased if operating IL is larger. The constant current driving method is suggested.

6.3 Signal Timing Diagram of Interface Signal

Input signals shall be low or High-impedance state when VDD is off. Signal electrical characteristics are as follows;

9.0   GENERAL PRECAUTION

9.1 Use Restriction

This product is not authorized for use in life supporting systems, aircraft navigation control systems, military systems and any other application where performance failure could be   life threatening or otherwise catastrophic.

9.2 Disassembling or Modification

Do not disassemble or modify the module. It may damage sensitive parts inside LCD module, and may cause scratches or dust on the display. HannStar does not warrant the module, if customers disassemble or modify the module.

9.3 Breakage of LCD Panel

9.3.1.If LCD panel is broken and liquid crystal spills out, do not ingest or inhale liquid crystal, and do not contact liquid crystal with skin.

9.3.2. If liquid crystal contacts mouth or eyes, rinse out with water immediately.

9.3.3. If liquid crystal contacts skin or cloths, wash it off immediately with alcohol and   rinse thoroughly with water.

9.3.4. Handle carefully with chips of glass that may cause injury, when the glass is   broken.

9.4 Electric Shock

9.4.1. Disconnect power supply before handling LCD module.

9.4.2. Do not pull or fold the LED cable.

9.4.3. Do not touch the parts inside LCD modules and the fluorescent LED's connector or cables in order to prevent electric shock.

9.5 Absolute Maximum Ratings and Power Protection Circuit

9.5.1. Do not exceed the absolute maximum rating values, such as the supply voltage variation, input voltage variation, variation in parts' parameters, environmental temperature, etc., otherwise LCD module may be damaged. 9.5.2. Please do not leave LCD module in the environment of high humidity and high   temperature for a long time. 11.5.3. It's recommended to employ protection circuit for power supply.

9.6 Operation

9.6.1 Do not touch, push or rub the polarizer with anything harder than HB pencil lead.

9.6.2 Use fingerstalls of soft gloves in order to keep clean display quality, when persons handle the LCD module for incoming inspection or assembly.

CONFIDENTIAL   Copyright©

9.6.3 When the surface is dusty, please wipe gently with absorbent cotton or other soft material.

9.6.4 Wipe off saliva or water drops as soon as possible. If saliva or water drops contact with polarizer for a long time, they may causes deformation or color fading.

9.6.5 When cleaning the adhesives, please use absorbent cotton wetted with a little petroleum benzine or other adequate solvent.

9.7 Mechanism
Please mount LCD module by using mouting holes arranged in four corners tightly.

9.8 Static Electricity
9.8.1 Protection film must remove very slowly from the surface of LCD module to   prevent from electrostatic occurrence.

9.8.2. Because LCD module use CMOS-IC on circuit board and TFT-LCD panel, it is very weak to electrostatic discharge. Please be careful with electrostatic discharge.   Persons who handle the module should be grounded through adequate methods.

9.9 Strong Light Exposure
  The module shall not be exposed under strong light such as direct sunlight. Otherwise, display characteristics may be changed.
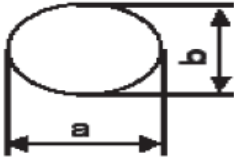

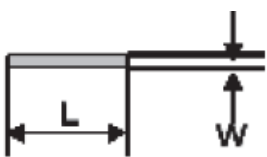

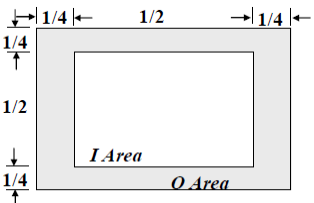

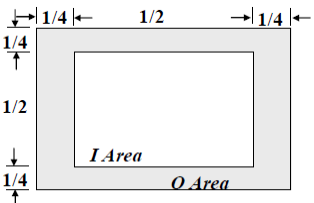

9.10 Disposal
  When disposing LCD module, obey the local environmental regulations.
